Lindab **Magestic™**

The elite magnesium galvanised steel rainwater system

Lindab Magestic is an improved galvanised steel material for rainwater system and standing seam applications. Magestic offers the same trusted Lindab product designs with a strengthened magnesium zinc alloy coating.

Elite Galvanisation
New technology has allowed the material to be developed using magnesium to create a stable barrier to protect zinc's porous structure against corrosion factors.

Proven Protection
Salt spray tests demonstrate the highest surface protection of any metallic coated steel. Magestic has more than twenty times the corrosion resistance of hot dipped galvanised steel.

Reduced Coastal Corrosion
Magestic corrosion in not influenced by the chlorine content of the environment. Natural exposure tests demonstrate more than three times the corrosion resistance of standard galvanisation in marine environments.

Self Healing
Galvanised coatings migrate to repair red rust on cuts and scratches. Magnesium is more anodic than zinc making the sacrificial properties of Magestic more active than standard galvanisation.

Lower Environmental Impact
Galvanised steel is already the most environmentally friendly material used in rainwater systems. Magestic has a reduced impact on zinc resources and less than 25% zinc run off into soils compared to hot dipped galvanised steel.

Ages Beautifully
Unpainted metal gutters naturally weather organically adjusting to the installation environment. Magestic settles to an attractive dark grey metallic appearance within 3-5 years after installation.

Lower Price
Efficiency improvements in production mean that savings can be passed to you. Magestic is the lowest price Lindab rainwater system.

10 year warranty
Lindab Magestic products all come with a 10 year warranty.

The King of Galvanised Gutters

Lindab **Magestic™**

The elite magnesium galvanised steel rainwater system

Lindab®

Elite Galvanisation

Strengthened magnesium zinc alloy coating, same trusted Lindab product design.

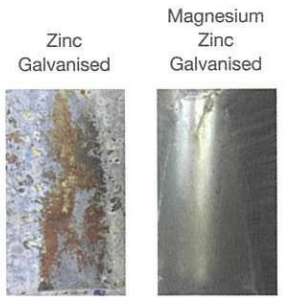
New Material Technology

The zinc coating composition used for Magestic is strengthened with 3% magnesium and 3.5% aluminium. Hot dipped zinc galvanised coatings have a porous structure, magnesium creates a compact structure with high corrosion inhibition and creates a stable barrier against corrosion factors.

Proven protection

Highest surface protection rating of any metallic coated steel

Salt spray tests demonstrate more than 20 times the corrosion resistance of hot dipped galvanisation (ISO 9227).



After 6 weeks salt spray test

Reduced coastal corrosion

Ultimate resistance in aggressive environments

Natural exposure tests demonstrate more than 3 times the corrosion resistance of standard galvanisation in marine environments.

Magestic corrosion rate is not influenced by the chlorine content of the environment.

Exceptionally Environmentally Friendly

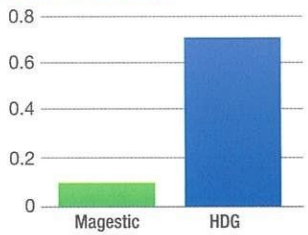
Reduced zinc resource consumption

Galvanised steel is already the most environmentally friendly material used in rainwater systems, Magestic has a reduced impact on zinc resources.

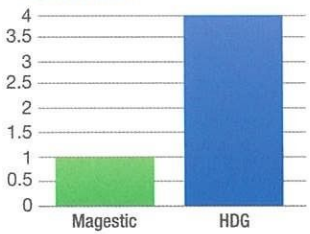
Adding a minor factor of magnesium to the zinc dramatically improves performance enabling reduced coating thickness.

Less than 25% zinc run off into soils compared to hot dipped galvanised steel.

Mass loss in alkaline environment
(pH11.7-5% amonia)



Runoff rate in C4 Maritime environment
(g/m²/year)

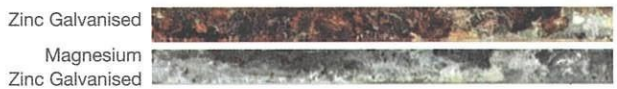


Self-Healing

Improved cut edge protection

Galvanised coating migrate to repair red rust on cuts and scratches. Magnesium is more anodic than zinc making the sacrificial properties of the Magestic coating more active than a zinc galvanised coating. The self-healing effect remains on heavy gauge Magestic material above 5mm.

cut edge salt spray test – 5mm gauge steel



Ages Beautifully

Natural weathering effect

Unpainted metal gutters naturally adjust to the installation environment

Magestic settles to an attractive dark grey metallic appearance within 3-5 years after installation.
